Content

From Authors 11

Introduction 13

1. Basic principles of material strength 15
1.1. Introduction 15
1.2. The division of stresses and strains 15
1.2.1. Normal stresses 15
1.2.2. Shear stresses 15
1.2.3. Reduced stresses 17
1.2.4. Strains classification 17
1.3. Strength criteria 17
1.3.1. Admissible stress for static loads 18
1.3.2. Stress-strain relations 18
1.3.3. Static factor of safety 19

2. Tensile and compressive strength calculations 21
2.1. Introduction 21
2.2. Tensile stresses 21
2.2.1. Gravitational breaking 22
2.2.2. Hooke's law 22
2.3. Compressive stresses 23
2.4. Deformations 24
2.4.1. Longitudinal deformations 24
2.4.2. Lateral deformations 24
2.5. Calculation of elements under tensile/compressive strength 25
2.6. Examples of calculations for stretched and compressed elements 26

3. Tensile stresses in the vessels 45
3.1. Stresses in cylindrical walls – barrels 46
3.1.1. Tensile circumferential stresses 47
3.1.2. Longitudinal tensile stresses 47
3.2. Stresses and wall thickness of cylindrical vessels 47
3.3. Stress and wall thickness of spherical vessels 48
3.4. Calculation of bolts for flange connections in vessels 48
3.5. Calculation of thin-walled vessel shells 55
3.6. Combined calculations for thin-walled shells and bolts 64

4. Surface pressure 70

5. Shearing and tangential shear stresses 72
5.1. Introduction 72
5.2. Shear stresses 72
5.3. Admissible shear stress 73

6. **Calculation of stresses σ_t, σ_{sc}, σ_n and τ_t** 74
6.1. Threaded connections 74
6.1.1. Calculation of threaded connections 75
6.2. Welded joints 82
6.2.1. Calculation of welded joints 83
6.3. Riveted joints 95
6.3.1. Calculation of riveted joints 96

7. Buckling stress 106
7.1. Introduction 106
7.2. Slenderness factor λ 106
7.3. Moments of inertia I_x, I_y, I_o, I_{min} 107
7.3.1. Steiner theorem 107
7.3.2. The method of calculating axial moments of inertia for complex cross-sections 109
7.5. Ranges of buckling 110
7.5.1. Elastic buckling 111
7.5.2. Non-elastic buckling (ductile) 112
7.6. Effective-length factor α and cases of buckling 112
7.7. Buckling strength calculations 113
7.7.1. Calculating admissible loads for components with pre-determined dimensions 114
7.7.2. Calculation of dimensions for given buckling loads 115
7.8. Examples of buckling calculations 115

8. Summary of discussed stresses 134
8.1. Introduction 134
8.2. The treatment procedure 134
8.2.1. Specific example of the calculation process 134
8.3. Examples of calculations 140

9. Principles of Mechanics 154
9.1 Introduction 154
9.2. Principles of Statics 154

9.2.1. Units used in mechanics 154
9.2.2. Newton's laws 158
9.2.3. The principles used in statics 158
9.2.4. Supports, nodes and their reactions 159
9.2.5. Flat, convergent system of forces 161
9.2.6. Flat parallel system of forces 163
9.2.7. Graphical methods of determining reaction forces 164
9.2.8. Spatial force system 166
9.2.9. Friction forces 169

10. Admissible stresses and fatigue 173
10.1 Admissible stresses in dynamic loads 173
10.2. Fatigue factors of safety 173
10.3. Admissible stresses 174

11. Torsional and bending stresses 176
11.1. Torsional stress 176
11.1.1. Admissible stresses 176
11.1.2. Angle of torsion criterion 178
11.2. Calculation examples of "pure" twisting 178

12. Bending stresses 185
12.1. Bending moment 185
12.2. Bending resistance modulus 186
12.3. Admissible bending stresses criterion 186
12.4. Deflection – criterion of deformation limits 188
12.5. Analytical method of calculating beams 189
12.5.1. Example of utilizing the calculation method 190
12.6. Graphical method of calculating beams 193
12.7. Other cases of bending stress 195
12.8. Calculation examples 196

13. Bending with torsion – reduced moment 204
13.1 Bending with torsion 204
13.2. Complex stresses in the calculation of shafts 205
13.3. Calculation examples 206
13.3.1. Calculations of agitator shaft of a reactor 206
13.3.2. Calculations of reduced moments 209
13.4. Two-plane reduced stresses in shafts 221
13.4.1. Calculating the shaft being twisted and bent in two planes 221
13.5. Practical use of shaft calculations 225

14. Summary of all discussed stresses 230
14.1. Introduction 230
14.2. Examples 230
14.2.1. Project of mounting an advertisement 230
14.2.2. Project of a motion system 240

Specifications of unitary symbols applicable in calculation of strength 249
